Description:

A web platform that simulates the Egyptian Premier League using dynamic algorithms to schedule matches, calculate results, and update team standings automatically. Users can choose their favorite team and play matches through a mini-game, while the system simulates the rest of the league in real time.

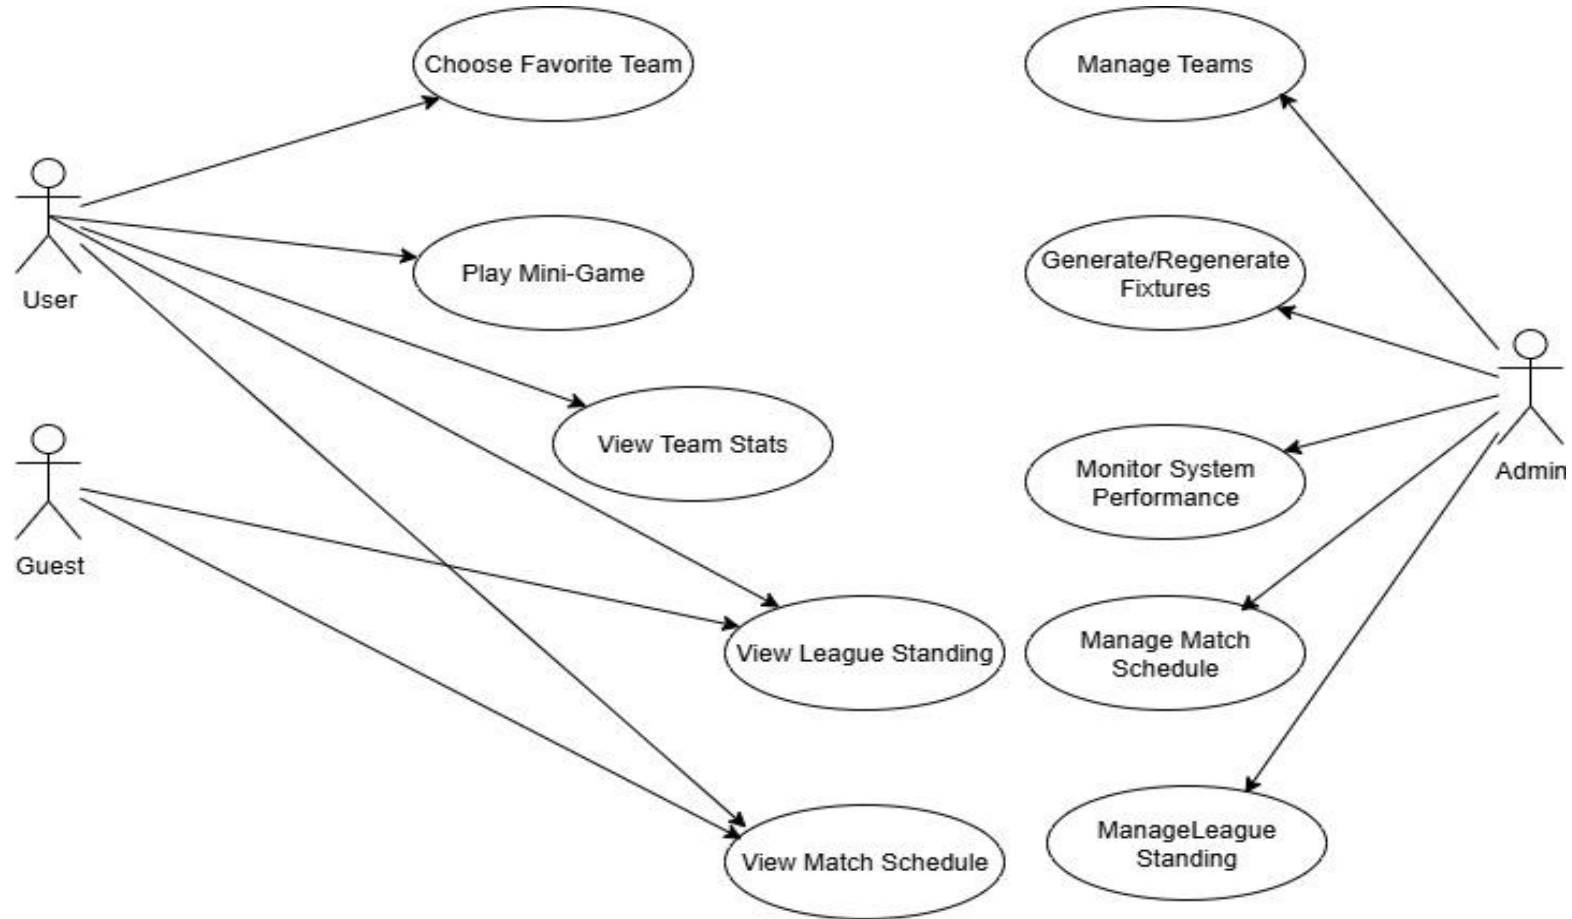

Functional Requirements:

Data Storage	The system shall store data (results, rankings, user progress) securely.
Team Registration	The system shall allow adding, editing, and deleting teams.
Match Scheduling	The system shall dynamically generate match schedules for all teams and rounds.
Match Results	The system shall record match results manually or automatically.
Points Calculation	The system shall calculate points after each match according to results.
League Standings	The system shall automatically update team rankings based on total points and goal difference.
Auto Simulation	The system shall simulate other matches automatically while the user plays their match.
Team Selection	The system shall allow the user to select a favorite team to play with.
Mini Game	The system shall provide an interactive mini-game for the user's match.
Statistics Display	The system shall display standings, match history, and performance stats.

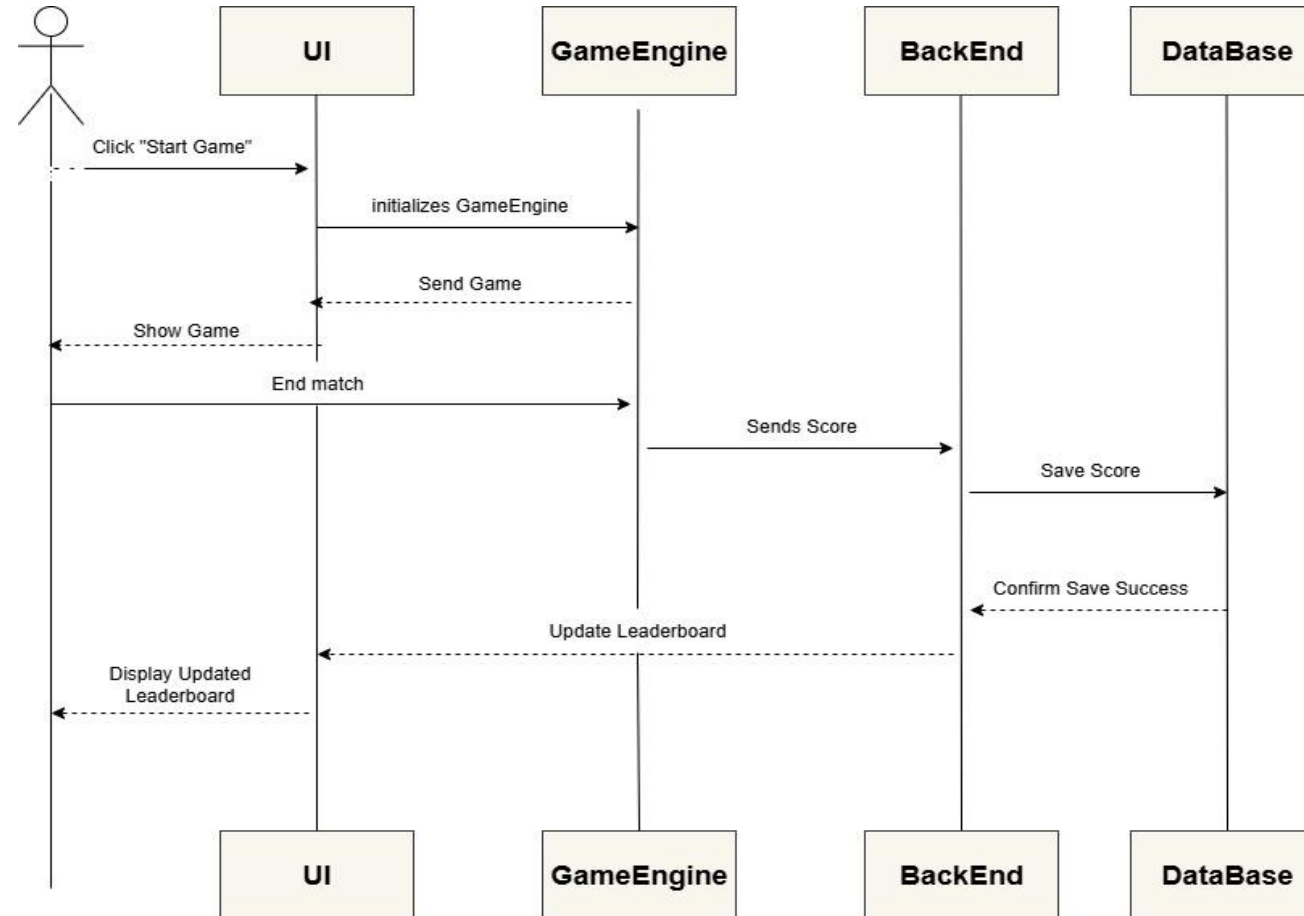

Non Functional Requirements:

Performance	Pages should load within 3 seconds.
Scalability	The system should support adding new teams or rounds easily.
Usability	The interface should be user-friendly and intuitive.
Accuracy	All match calculations and standings must be correct.
Security	User and match data must be protected from unauthorized access.
Compatibility	The system should work on all major browsers and devices.
Responsiveness	The design should adapt to mobile, tablet, and desktop screens.
Interactivity	The mini-game should respond smoothly to user input.
Maintainability	The codebase should be easy to update and extend.
